Why has the writer put the information in boxes?

What do penguins use their wings for?

Do you think all penguins lay eggs?

Penguins

Penguins live in hot and cold places in the Southern Hemisphere. This is the bottom half of the world, below the Equator. They have wings but they can not fly. There are 17 sorts of penguin.

This is an Emperor penguin. It is the biggest penguin. It has patches of yellow on its ears and breast. They live in a very cold place called Antarctica and catch fish from the sea to eat. They do not build a nest. The male penguin holds eggs in its belly pouch and baby penguins stand on the male penguins feet so that they do not get cold.

This is a Little penguin. It is the smallest penguin and is sometimes called a Blue penguin. It lives in Australia and New Zealand. They usually make a hole in the ground to lay their eggs and the male and female take it in turns to look after them.

This is an African penguin. They live in Africa. It has a black band on its white breast and patches of skin of its face. The skin helps the penguin to cool down when it gets too hot. It digs into the ground to lay its eggs.

This is an Adelie penguin. They have long tails that drag along the ground and white around their eyes. The female penguin lays her eggs in a nest that she makes with pebbles and moss. The male keeps the eggs warm and the female goes to hunt for food. Then they swap jobs.

This is a Humboldt penguin. It is sometimes called a Peruvian penguin. They live in South America. It has patches of skin on its face to help it cool down and it has a black bill. It digs into the ground to lay its eggs.

This is a Snares penguin. They live on an island in New Zealand. It has a yellow crest on its face and red eyes. The lady penguin lays 2 eggs in a nest. The first one is a lot smaller than the second one. The second egg hatches a much bigger penguin that is better at surviving.

What do penguins use their wings for?

Do you think all penguins lay eggs?

Why do you think Emperor penguins do not build a nest?

Which two penguins are the most similar?

Penguins

Penguins live in hot and cold places in the Southern Hemisphere. This is the bottom half of the world, below the Equator. They have wings but they can not fly, so they use them as flippers. There are 17 different types of penguin.

All penguins hunt for food in the sea. They have spines in their mouths to stop their prey from swimming away. They have a diet of fish, squid and krill.

Baby penguins are called chicks. They are born with very fluffy feathers and they can not go into the water until they have grown their adult feathers. The parents hunt for food, swallow it down and then bring it back up to feed to their chicks.

Yellow-eyed Penguin

This type of penguin can be found in New Zealand and has a band of yellow feathers on its head as well as yellow eyes. The Yellow-eyed Penguin prefers to eat fish but will also eat cephalopods. They are different to many other species of penguin because they nest alone (instead of in huge groups) in thick forest, usually at the foot of a tree.

Rockhopper Penguin

There are three types of Rockhopper penguin: Northern Rockhopper, Eastern Rockhopper and Southern Rockhopper. There are very tiny differences between them and so they are classed as one species. They live in cold places and have red eyes, an orange beak and yellow spiky feathers on their head. Rockhoppers make a nest with pebbles and peat and lay two eggs. The second is normally stronger than the first.

Chinstrap Penguin

Chinstrap penguins have a black line across their cheeks that looks like a chinstrap. They mostly eat krill but sometimes they eat fish. These penguins live in cold places. Chinstrap males build a nest with pebbles and the female lays two eggs. The parents take turns to look after the eggs.

Emperor Penguin

This is the biggest penguin. It has patches of yellow on its ears and breast. They live in Antarctica and catch fish from the sea to eat. They do not build a nest. Instead, the male penguin holds the egg in a pouch in its belly. After the chicks have hatched, baby penguins stand on the feet of its father so that they do not get cold.

Little Penguin

This is the smallest penguin and is sometimes called a Blue penguin. It lives in Australia and New Zealand. They usually make a hole in the ground to lay their eggs and then the male and female take it in turns to look after them. Sometimes they nest under beach houses.

African Penguin

These penguins live in Africa. It has a black band on its white breast and patches of skin on its face. The skin helps the penguin to cool down when it gets too hot. To lay its eggs, it burrows into the ground or lays them in rock crevices or under shrubs. This species eats a lot of anchovies.

Adelie Penguin

This species have long tails that drag along the ground and white around their eyes. The female penguin lays her eggs in a nest that she makes with pebbles and moss. Adelie penguins often fight over these small stones and steal them from each other. The male keeps the eggs warm and then the female goes to hunt for food. Then they swap jobs.

Humboldt Penguin

This species is sometimes called a Peruvian penguin. They are a medium-sized penguin that live in South America. It has patches of skin on its face to help it cool down and it has a black bill. It digs into the guano (bird poo) or the ground to lay its eggs. Sometimes it uses caves.

Snares Penguin

They live on an island called Snares Island in New Zealand. It has a yellow crest on its face and red eyes. The female penguin lays two eggs in a nest. The first one is a lot smaller than the second one. The second egg hatches a much bigger penguin that is better at surviving.
